Qlarm 2.181.0

March 02, 2023

What's New:

- Tag Management:
  - Add MQTT Tags
  - Add OPC UA Tags: New tags are pushed to the edge location.
  - Delete Tag
  - Update Asset on Tag Change
- Endpoint Management
  - Added OPC UA Security
  - Recreate Asset Model
- Dashboard
  - Unified response when no scopes are found.
  - Traffic Optimization reduced data transfer.
  - Implemented Scope Filtering

Bug Fixes:

- Small but significant improvements and fixes were made across the application.
  - Events view filters are showing above profile.
  - Parent assets which do not have writable tags inside are displayed in Set Tag Value widgets'.
  - Operator shows wrong option when editing value-based condition after creating time-based condition.
  - Profile dropdown menu is only collapsing when avatar image is clicked.
  - Users' First and Last name changes are not applied to profile dropdown menu
  - API Tokens cannot be edited if asset scopes are not edited.
  - Custom time period panel issue in Live view and Events-History view
  - Notifications are not received for time-based events.
  - When new dashboard is created, user is redirected to Default dashboard
  - Dashboard configuration issues when unconfigured 'Endpoint State' widget is added to dashboard
  - IoT Gateway type endpoint cannot be created.

Known Bugs:

- Dashboard:
  - Set Tag Value Widget: after setting a new value for a tag, the value is not shown till the new value is read from the edge location
  - Get Latest Value Widget: Doesn't show value for tag of type "Boolean"
