

Qlarm 2.120.0

March 17, 2023

What's New:

- Endpoint Management
 - Get configured tags from the Qlarm Edge Device
 - Get diagnostics info from Qlarm Edge Device

Bug Fixes:

- Small but significant improvements and fixes were made across the application.
 - Tags are not hidden from chart when hide icon is clicked | Trend view
 - Multiple selection only working page by page | Endpoints - Tags view
 - Dashboard shows no data on all widgets when 'Constant value Tag' is added
 - Widgets design is not responsive to longer data input
 - Fix creating default dashboard for new users
 - Export endpoint package issue | Obsolete

Known Bugs:

- Dashboard:
 - Changing tag name, precision, and engineering unit does not propagate on the existing dashboards: *Expected to be fixed with the next release.*

Planned Features* **:

- Tag Management:
 - Bulk Import, Q2 2023
