

# Qlarm 2.130.1

May 17, 2023

## What's New:

- Endpoint Management
  - Send the deadband value to the IoT Edge
  - Implement and send the Heartbeat value to the IoT Edge
  - Filter tags by type
- Security Improvements

## Improvements:

- Dashboard:
  - User should be able to delete widgets whose tags are deleted/unscoped
  - Engineering unit value should be displayed when widget with longer tag data value is resized
- Live View:
  - Fix spacing between Last value and Engineering unit
- History View:
  - Add loading spinner in Events

## Bug Fixes:

- Dashboard:
  - Engineering unit out of place when 'Tag name' label is added to 'Latest Value' widget
  - Toggle button returns to false after changing tag value to true
  - Widgets are showing incorrect last change time
  - Latest value gauge showing last value in incorrect format
  - Issue with 'Tag State' widget when Add widget panel is opened then closed
- Endpoints:
  - Allow user to edit multiple tags without changing 'Value type' or 'OPC UA URL'
  - Paging error in Events view and Endpoints-Tags view
- Notifications:
  - Page is unresponsive when custom time period panel is opened
- Small but significant improvements and fixes were made across the application
  - Endpoints view header issues when minimizing browser
  - Set last change and last value values to empty or null when creating missing tag asset through Endpoints->Create asset
  - Mandatory fields error messages are missing

## Known Bugs:

## Planned Features\* \*\*:

- Tag Management:
  - Bulk Import & Export, Q2 2023
