

Qlarm 2.140.1

August 3, 2023

What's New:

- Dashboard
 - Volume Widget
- Qlarm API
 - Expose Historical Data API

Improvements:

- Security Improvements
 - Finished penetration testing improvements.
- Reduced Duplicate Event Instances on high frequent data.
- Change color of Event chart
- UI Improvements
- Display success message when user sets dashboard as default
- Remove 'Report Action' dropdown when saving new report | Trend view
- Improve trend chart for high frequency data

Bug Fixes:

- Copied Dashboard cannot be deleted
- Geo Location is set but not displayed on map | Edit endpoint panel
- 'Get Relationship' displays info from last opened asset
- Dropdown menus out of place when editing recipient or recipient group
- 'Last Value' column is hidden when minimizing browser in Live view
- Tags are not checked in tree view when reports are loaded | Trend view
- Issues with redirecting when page documentation is opened from 'Help' button
- Recipients and Templates are missing when edit event panel is opened from Events view
- All tags are removed from chart when deleting a single tag from a Loaded Report
- User should not be able to input non-numerical characters to Integer and Float tags
- Drop-down menu arrow collapsing with text in API Tokens
- Added tags color issues | Trend View
- Previous relationship is not deleted when new one is added to asset
- Tree view is empty when redirected to Trend view from Live view
- User cannot sort event instances from Events View
-
