

# Qlarm 2.168.1

October 9, 2023

## What's New:

- Event View: Shelving Event instances and actions menu
- Show Difference between two tags values for custom time period.
- Show tag values for exact time period.

## Improvements:

- Unify modal windows closing behaviour.
- Add 'Recipient ID' parameter to response body when executing 'Create Recipient' API call.
- 'Edit' event option from 'Events' view should not be available for users that do not have permissions to edit events

## Bug Fixes:

- Dropdown displays all recipients after filtering then selecting all filtered results.
- Default dashboard theme changes when cancelling a creation of new dashboard.
- Remove the empty spaces for unchecked options in the context menu of the widgets.
- 'Volume' widget responsiveness to resizing issue.
- Endpoint is not displayed after reloading 'Tags' view and navigating back to 'Endpoints' view.
- User is able to create ranges with no input in 'Start' and 'End' fields in 'Volume' widget.
- Ack. Time and Ack. By from 'History' tab display wrong info when event is Acknowledged
- Time condition should not be added with empty 'Value' field.
